### 2.1 Thoughts / Intentions

**17:26** Ill try to do the regex exercise 3 right now. Im a bit confused about the Regular Expressions, but I will do my best. Overleaf is working fine though, I have been playing with it this afternoon and it is already easier to use.

### 2.2 Action

- Imported the data from excel sheet to regex101
- Tried the regex [A-Za-z0-9]
- All got highlighted. Not usable
- Tried to identify the spaces,tabs or new lines in the dataset
- Now we have something more usable. Ill try to substitute with the spaces with "
- That did not work
- Trying with (space)
- Now I have a big lump of text. Will substitute that with the original
- Used again and substituted with ", ". IT WORKED. Or I think so.

### 2.3 Results

Link to the results on regex101: <https://regex101.com/r/oTMmO6/1> It does miss a " in the start and in the end, but I am still proud of my results.

### 2.4 Final Thoughts

**17:54** Spent around 30 minutes on the first exercise and completed it with only minor errors. Feel confident about the road ahead.
